

Your doctor has ordered the drug paclitaxel to help treat your illness. The drug is given by injection into a vein.

This medication is used to treat:

- metastatic breast cancer
- metastatic ovarian cancer
- Kaposi's sarcoma

This medication is sometimes prescribed for other uses; ask your doctor or pharmacist for more information.

Paclitaxel is in a class of drugs known as taxanes. It slows or stops the growth of cancer cells in your body. The length of treatment depends on the types of drugs you are taking, how well your body responds to them, and the type of cancer you have.

Other uses for this medicine [Return to top](#)

Paclitaxel has been used to treat head and neck cancer, non-small cell lung cancer, small cell lung cancer, and bladder cancer. Talk to your doctor about the possible risks of using this drug for your condition.
